SUMMARY

Backend Engineer with 6+ years of experience building scalable backend services, REST APIs, and event-driven systems using Node.js, Express.js, SQL Server, and Azure. Experienced in designing cloud-native services, Azure Functions, messaging workflows, observability solutions, and high-volume data processing for enterprise platforms. Built systems processing 1M+ IoT messages/day and redesigned report pipelines handling 8.5M+ rows without memory failures. Strong experience in distributed systems, system integration, production troubleshooting, and platform modernization.

WORK EXPERIENCE

TATA Consultancy Services Ltd.

Backend & Cloud Engineer

Kolkata, West Bengal

Aug. 2020 - Present

Backend & Cloud Engineer — Azure IoT Platform (Dec 2024 – Present)

- Developed Node.js/Express.js backend services and REST APIs for an Azure-based IoT platform processing **1M+ telemetry messages per day**.
- Redesigned report generation using streaming writes and direct Azure Blob Storage uploads, enabling reliable exports exceeding **8.5M rows** without application memory failures.
- Designed and implemented event-driven Azure Functions for dead-letter recovery, infrastructure monitoring, alarm generation, and automated data synchronization.
- Built centralized observability across Azure Service Bus, Event Hubs, VMs, App Services, and data synchronization workflows to enable proactive detection of operational failures.
- Implemented secure Azure Blob Storage access using Key Vault-managed SAS tokens with automated expiry monitoring and notification workflows.

Full-Stack Developer — JIRA–ServiceNow (IRIS) Integration Platform (Apr 2023 - Dec 2024)

- Developed Node.js/Express.js REST APIs integrating JIRA and ServiceNow data into a centralized enterprise workflow platform.
- Implemented backend workflows for cross-system ticket linking between JIRA stories and ServiceNow incidents, change requests, and problem records.
- Built end-to-end features including ticket viewing, editing, search, sorting, filtering, and workflow navigation across integrated JIRA and ServiceNow datasets.

Backend/Data Engineer — Enterprise Processing & Platform Upgrade (Jan 2022 - Mar 2023)

- Developed and maintained Databricks-based data processing pipelines using SQL, PySpark, and Databricks Notebooks to transform and consolidate data from multiple enterprise data sources into business-facing datasets.
- Contributed to the migration of enterprise messaging systems from Apache Kafka to Confluent Kafka, performing application updates, infrastructure changes, testing, and production rollout activities.
- Took ownership of testing and production rollout for the Kafka migration following the project lead's departure, coordinating 5–6 engineers across application updates, validation, and deployment activities.
- Led the migration of 3 ETL applications from GemFire 8 to GemFire 9, supporting platform modernization efforts while ensuring application stability throughout the transition.
- Modernized CI/CD pipelines by migrating legacy Jenkins workflows to the XENA platform, updating Jenkinsfiles and deployment configurations for containerized deployment environments.

Backend Engineer — Automation & Stability Projects (Aug 2020 - Dec 2021)

- Developed a Spring Boot–based automated notification system that alerted managers about upcoming planned employee leave schedules, reducing manual tracking efforts and improving workforce planning.
- Enhanced and stabilized enterprise SFTP-based file transfer workflows used within ETL processing pipelines, improving reliability for large-file transfers and reducing unexpected job failures.
- Investigated and resolved production incidents across 3 enterprise applications, performing root cause analysis and implementing fixes to maintain application stability and service availability.

CORE SKILLS

Backend: Node.js, Express.js, REST APIs, Event-Driven Architecture

Languages: JavaScript, TypeScript, Python, SQL, Java

API & Security: Rest APIs, OAuth 2.0, JWT, Swagger/OpenAPI

Cloud & Messaging: Azure Functions, Azure Service Bus, Azure Event Hubs, Azure IoT Hub, Azure Blob Storage, Azure Key Vault, Azure App Services, Azure Cosmos DB, Azure Application Insights, Azure Monitor
Databases: Microsoft SQL Server, PostgreSQL, Cosmos DB
Testing: Jest, Mocha
Frontend: React.js, Material-UI, HTML5, CSS
DevOps: Git, Jenkins, Docker, CI/CD, Linux
Data Engineering: Azure Databricks, PySpark
Engineering: Distributed Systems, System Design, Production Troubleshooting

EDUCATION

University of Engineering & Management, Kolkata

Kolkata, West Bengal

B.Tech in Computer Science and Engineering

CGPA: 9.51

Graduation Date: Aug. 2020
